

SANITIZING SPRAY

Preparation & Usage

GCNA is transitioning from SteriFab to BAC STOP 3A as our product sanitizing spray.

BAC STOP 3A is an Antiseptic Hand Sanitizer in a liquid form. Mixed with water, it becomes an effective sanitizing spray that works comparably to SteriFab.

PREPARATION

1. Apply gloves and protective eyewear.
2. Pour one part BAC STOP 3A to one part water in a spray bottle (50/50 mix).
3. Seal spray bottle and shake well to mix.
4. Label each bottle: "Sanitizing Spray".

USAGE

1. Set nozzle to mist and spray donations. Do not wipe or rub in.
2. Allow treated donations to rest for 10 minutes.
3. Process normally.

Store in a cool, well-ventilated place away from flammable items.

CAUTIONS:

- Ensure the spray bottle intended for BAC STOP 3A is rinsed well and contains no unknown chemicals.
- Severely eye irritant: wear protective eyewear to protect against splashes. In case of contact with eye, remove contact lenses (if applicable) and use eye wash station for several minutes.

**Stores are encouraged to work through any remaining supply of SteriFab*
