

Important General Information:

- The Steri-Fab spray must be used on all donations as they arrive at the donation door.
- *Label spray bottles **Steri-Fab** to ensure no cross contamination with other cleaning chemicals occurs.
- 2 bottles of Steri-Fab spray must be kept at the Donation Attendant workstation at all times. Check to make sure there are 2 full spray bottles available at the beginning of each day and each shift. See picture on right for workstation setup.
- Make sure the spray bottle with the Steri-Fab spray is set for mist and not direct stream for better coverage across donations.

*Safety requirements:

- Remember to wear gloves.
- Remember to wear goggles when filling and refilling bottles.
- Steri-Fab is FLAMMABLE. Only store in a dry, well ventilated area away from any heat source.
 - DO NOT SMOKE while using Steri-Fab.

Follow the directions below to disinfect donations:

1. * Unload the donations from the vehicle as you normally would and provide the donor with a tax-deductible receipt. Place donations in the appropriate gaylord (follow 80/20 rule).
2. **There is no need to remove the donations from a bag or box.** Once you mark the donation on the Daily Donor Log, spray one to two pumps of the Steri-Fab over the donations in the gaylord as shown in the picture. Repeat for all donations as they are received.
3. Allow items to dry at minimum 10 minutes before processing.
4. When finished, return the spray bottle to the workstation.
